

***MT16004 Research, development and extension program for control, eradication and preparedness for vegetable leafminer***

# Have you seen an exotic leafminer?

Learn about these new pests of vegetable, nursery, melon and potato crops.

## **Project speed drawings**

In 2018 and 2020, project partners developed two speed drawings. These videos outline the potential impacts that exotic leafminers could have on Australia's horticulture industries were they to move into production areas with no management in place. The videos also explore project activities undertaken between 2017 and 2020.

*The 'Research, Development and Extension program for control, eradication and preparedness for vegetable leafminer' (MT16004) project has been funded by Hort Innovation using the vegetable, nursery, melon, and potato research and development levies and contributions from the Australian Government. Hort Innovation is the grower-owned, not-for-profit research and development corporation for Australian horticulture.*
