

MT16004 Research, development and extension program for control, eradication and preparedness for vegetable leafminer

Webinar resources

Learn about exotic leafminers

Webinars have formed an integral part of the MT16004 project, particularly in its final year. Several region-specific webinars have been developed, including webinars aimed at industry in Western Australian, Tasmania, Queensland, and Victoria (Melbourne, Gippsland).

Project partners were involved in a final project webinar in July 2020, which focused on pest biology, assessing regional risk of exotic leafminers, surveillance and monitoring, and chemical and biological management.

cesar and **AUSVEG** also took part in a melons industry podcast.

The 'Research, Development and Extension program for control, eradication and preparedness for vegetable leafminer' (MT16004) project has been funded by Hort Innovation using the vegetable, nursery, melon, and potato research and development levies and contributions from the Australian Government. Hort Innovation is the grower-owned, not-for-profit research and development corporation for Australian horticulture.
